

MaxxECU

Notes:

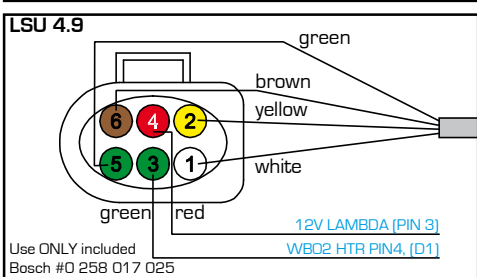

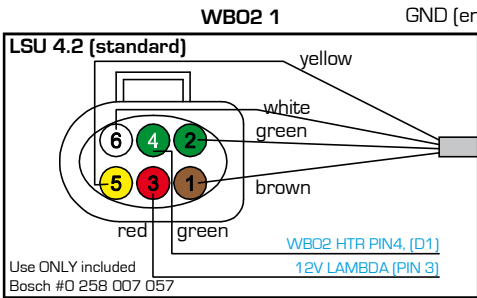

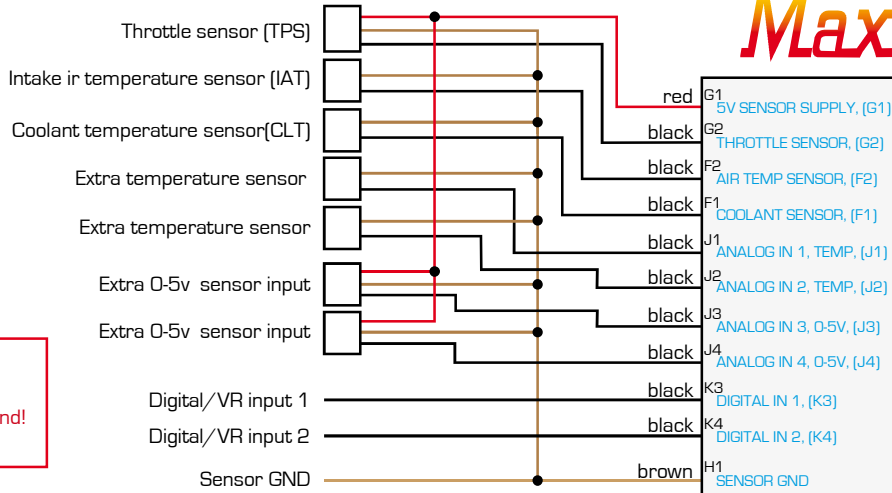

Cables shields should only be grounded through the ECU.
Text in blue is the cable markings.

Digital input wiring

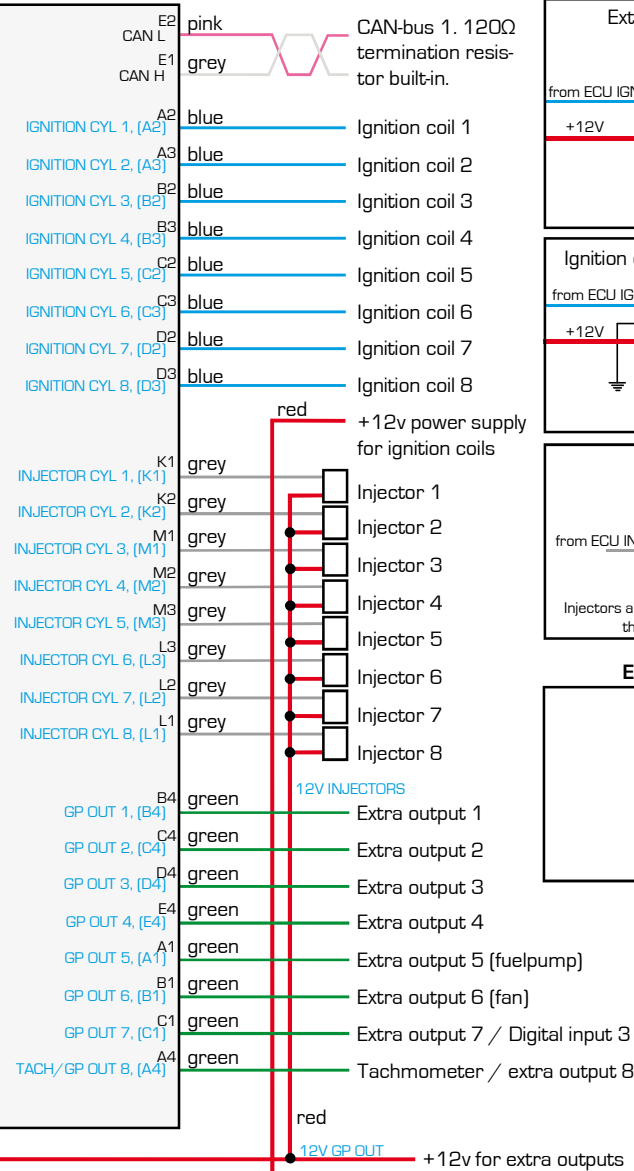

Sensor GND must **NEVER** be connected to chassis ground!

Wiring alternative for crank / home signal

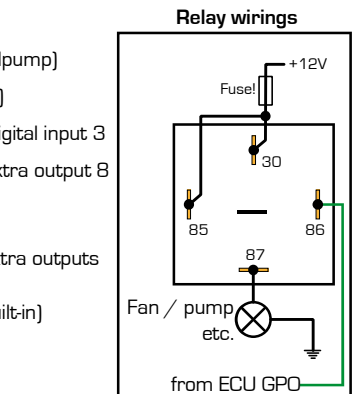

Available pins in connector uses as needed.
Small pin = max 15A
Big pin = max 25A

All GPO/INJ has 30V flyback as standard built-in

Options for connecting ignition coils

MaxxECU V1

MaxxECU PRO

MaxxECU PRO Connector 3

Warning: Correct sensor must be selected in MTune before usage!

Notes:
 Cables shields should only be grounded through the ECU.
 Text in blue is the cable markings.

MaxxECU

Sensor GND must **NEVER** be connected to chassie ground!

If the "GPO 23-30 FLYBACK" is NOT connected, the standard 30V internal flyback is used, which gives a faster response of the solenoids. To get 12V flyback on GPO 23-30, connect the F1 wire to the solenoid 12V power supply. This will result in slower movement of solenoids, suitable for some "floating" WTi solenoids.

MaxxECU PRO Connector 4
